

## EXP 4 OUTPUT:

The screenshot shows a C program being executed in a development environment. The source code in `exp4.c` implements a process scheduling algorithm. It takes the number of processes (4) and their burst times (6, 2, 8, 3) as input. The output displays a table of process execution metrics and a message indicating the process exited after 11.63 seconds.

```
#include <stdio.h>

int main() {
    int n, i, j;
    int bt[20], p[20], wt[20], tat[20];
    int temp;
    printf("Enter number of processes:");
    scanf("%d", &n);

    for (i = 0; i <= n - 1; i++)
        scanf("%d", &bt[i]);
    for (i = 0; i <= n - 1; i++)

    {
        for (j = i + 1; j < n; j++) {
            if (bt[i] > bt[j]) {
                temp = bt[i];
                bt[i] = bt[j];
                bt[j] = temp;
            }
        }
    }

    wt[0] = 0;
    for (i = 0; i <= n - 1; i++)
        i <= n - 1; i++)
        wt[i] = wt[i - 1] + bt[i - 1];
    for (i = 0; i <= n - 1; i++)
        tat[i] = wt[i] + bt[i];

    printf("\nProcess\tExecutionTime\tWaiting Time\tTurnaround Time\n");
    for (i = 0; i <= n - 1; i++)
        printf("P%d\t%d\t%d\t%d\n",
               i + 1, bt[i], wt[i], tat[i]);

    return 0;
}
```

Output window content:

```
Enter number of processes:4 6 2 8 3

Process ExecutionTime    Waiting Time    Turnaround Time
P1      2                32838          32840
P2      3                32840          32843
P3      6                32843          32849
P4      8                32849          32857

-----
Process exited after 11.63 seconds with return value 0
Press any key to continue . . .
```
